

pintec - modular clamping system – Fix your workpieces in seconds!

With our modular clamping system **pintec** you can fix fast and easily difficult shaped workpieces in the metrology room. If you work with a small number of pieces, prototypes or small series, **pintec** is exactly the right thing.

With **pintec** we have the practical and flexible solution for the user in the metrology room, who again and again has the task, to measure quickly a difficult formed workpiece. Very often it is not profitable, to build a special fixture for small series, anyway the workpiece must be fixed for coordinate or optical metrology and must be brought in a secure and special position.

The easy, fast, professional and effective solution in this case is **pintec**.

Construction and handling of **pintec** are very easy and so the fixation of difficult and complex formed workpieces is in the future no problem anymore.

Pintec is also successfully used in the fields of laser- and needle-engraving.

Meantime a lot of well-known companies work successfully with our modular clamping system **pintec**.

Find out for yourself and visit us in hall 5 booth 5407 at the Control 2021.

We look forward to your visit!
