

For over a decade, Adaptsys have distributed for the world's leading names in device programming, tape & reeling and carrier tape – providing innovative solutions to both the Electronics Manufacturing Industry and Mechanical Component Manufacturers.

Alongside the distribution products, Adaptsys provide their own leading-edge systems and tools, adding value for customers by increasing productivity, traceability and quality production.

At this year's Motek, Adaptsys presents its new Re-flex II On-demand Carrier Tape Forming System, now capable of forming pockets up to 30mm in depth and on tape widths up to 88mm. The real advantages offered by Re-flex II of savings in cost, space and time can be realised by a wider component packaging marketplace.
